Results Met With Indifference, Indignation

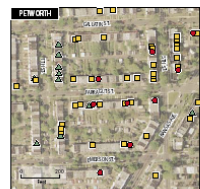

Results of the city's water testing last year showed elevated lead levels for more than 4,000 of the 6,118 homes tested. The District map below shows only the households with lead readings 10 times the limit set by the Environmental Protection Agency—15 parts per billion. An informal, door-to-door survey of residents in selected neighborhoods revealed little interaction between neighbors—including those whose homes tested very high and those whose homes had not been tested. Many residents seemed uninformed or unconcerned about the health dangers posed by lead in the tap water.

HOW THIS MAP WAS CREATED:

■ From March 2003 to January, the water was tested in more than 6,100 D.C. homes. This map represents lead readings from the second draw of water, using a sample taken one to two minutes after the tap was turned on in the morning. These second readings are expected to produce lower lead levels, but the results in this District during the last year point to a greater, previously unforeseen problem.

■ The Post database is based on lead-testing results provided by Dorothy Brill, a city activist who operates www.dwatch.com, an independent Web site monitoring D.C. government. The Post matched the results against property records to obtain more detail on the homes. Post reporters also verified many of the individual results with residents who had received official letters from the D.C. Water and Sewer Authority.

■ Errors can occur in the readings for a range of reasons. The water samples, drawn by resident volunteers, can be difficult to take correctly. Errors in data entry and illegible writing also can affect accuracy. The scanning and matching process introduces another potential source of error. WWSA has refused to release the original results through the D.C. Freedom of Information Act, making further fact checking impossible.

KEY
All figures are in parts per billion (ppb), "parts per billion" is 1/100,000,000.
● Above 150
■ 15 to 150
▲ Below 15

"It doesn't make sense to me. People have been living here 80 to 90 years in some cases, and it seems like they'd be having problems if it was bad for you. I'm wondering if WWSA is just coming up with all this as a way to make money."

— Ernest Fitzgerald, 608 block of Emerson Street NW

Vince Haskins Jr., of Bethesda, buys bottled water for each month, but his WWSA bills have tripled in recent years.

"It was very upsetting for me that they didn't just pick up the phone and say the lead in your water is very high and you shouldn't be drinking it. They didn't explain it to me. ... They haven't been upfront with us and honest about what is going on."

— James Berger, 1718 Street SE

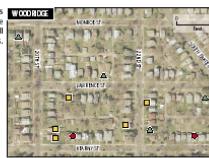

In some test areas, adjacent homes showed a full range of lead levels.

"We've been drinking bottled water for some years, but now I make sure we cook with it. It's a scary situation. Everyone in the neighborhood basically is buying water."

— Evelyn Jackson, 2800 block of Lawrence Street N

Some neighborhoods showed sparse testing, with a full range of results.

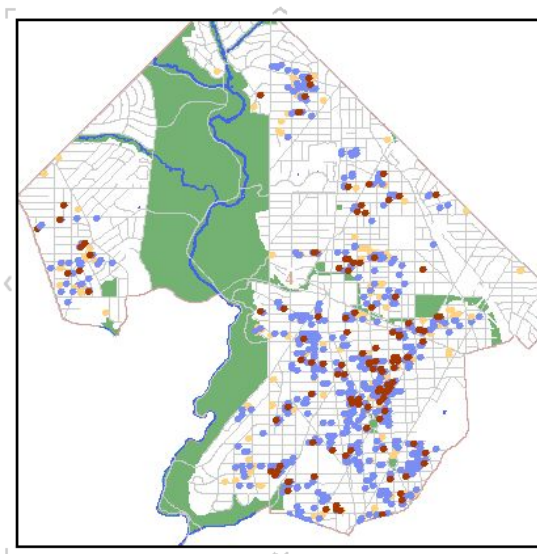

Note: This scale is for the District map.

D.C. Lead Test Results: Ward 4

Click on the dots to see first and second draw lead test results for those homes. You can zoom in by clicking on the zoom scale below and to the left. You can move around the ward by clicking the arrows at the edges of the map.

Money as a Weapon

The U.S. has spent at least \$2.8 billion under the CERP Program in Iraq, which lets senior military officials "relieve and reconstruction" projects with minimal oversight. The money has been spread throughout Iraq ranging from small payments for doors damaged in treatment plants. | [About the CERP Database](#)

What's this all about?

This interactive timeline highlights events surrounding the employment of Marlon Mikesell. The former Bergenfield tax official was arrested in March 2007 for allegedly stealing \$196,000 in borough tax money. Officials are now sorting out why the town was not properly insured for the loss.

How to use the timeline:

Scroll the timeline by grabbing it with the mouse and dragging it left or right, or double-click the top or bottom time band to quickly jump to different months and years. View informational pop-up boxes by clicking on the dots or bars. Highlighted titles link to documents and stories.

THE DISTRICT'S LOST CHILDREN

Babies at Risk

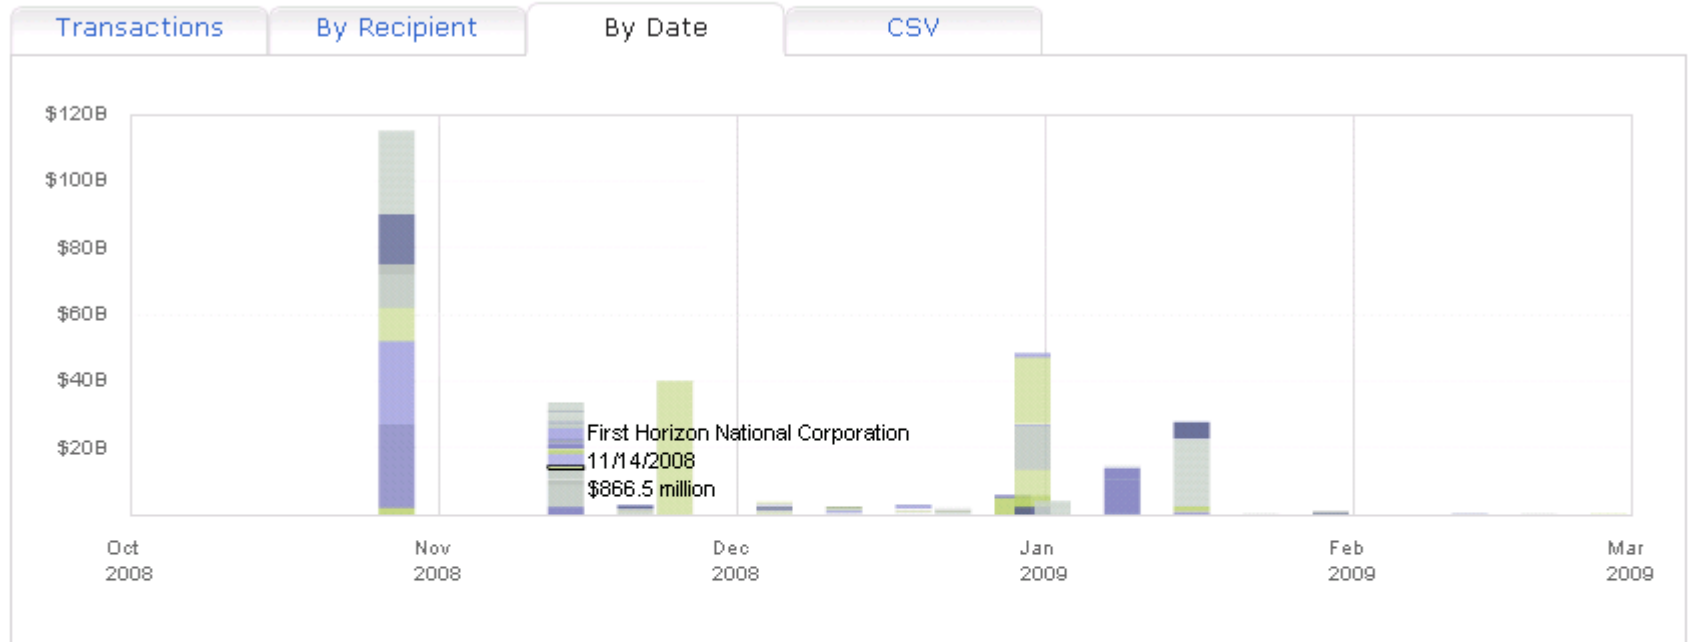

A Succession of Warnings: Fragile Infants

Reviewers from the D.C. Child and Family Services Agency and the D.C. Child Fatality Review Committee repeatedly warned city officials that medically fragile infants were being inadequately monitored after they left the hospital. The bars below contain the names of children who died and the number of warnings after each death. Deaths that occurred before 1995 are not included because fatality records from that period were incomplete.

HOW JEFFERSON COUNTY'S DEBT BALLOONED

Jefferson County has accumulated more than \$4.6 billion in debt, much of which carries interest rates that are now soaring because of market conditions.

In this chart, instances in which the county borrowed money are represented by circles, the size of which corresponds to the amount of the bond issue. The bond issues are arranged in chronological order top to bottom, and begin with the 1994 federal court order that forced the

county to repair its sewer system.

The only county bond issue not represented among the circles are general obligation bonds, which at \$193.7 million represent a small portion of the county's overall debt.

By following the lines that link many of the circles, you can see how older debts, most with fixed interest rates, were refinanced into debt carrying variable rates.
